

Cell/Tissue Culture and Cell Transfection

Media, filtration - Thermo Scientific Nalgene

Filter units, bottle top, PES membrane, 0.45µm, Thermo Scientific Nalgene®

S

54

- Contains polyethersulfone (PES) membrane that is low binding, low in extractables and delivers high flow rates
- Membrane pore size and material clearly marked on collar
- Moulded in graduations

- Side arm with quick disconnect tubing adapter
- Non-cytotoxic and non-pyrogenic
- Disposable bottle top filters securely screw onto bottles with 33mm or 45mm neck sizes
- Allows direct filtration of liquid into sterile bottles

Filter units, nylon membrane, Thermo Scientific Nalgene®

S

54

For sterilising media and other reagents used in tissue culture and extremely sensitive cell culture work.

The nylon membrane has extremely low levels of extractables (less than 0.5% by weight), is naturally hydrophilic and contains no wetting agents.

The membrane is alcohol resistant. Colour coded red collars. Non-pyrogenic. Non-cytotoxic **TKV-230-120P** has 500mL upper capacity.

Filter units, tube top, conical, PES membrane, 0.2µm, Thermo Scientific Nalgene®

S

55

- Thermo Scientific Nalgene® certified
- Fastest flow rate membrane
- Low protein binding

- Non-cytotoxic
- Non-pyrogenic
- Radiation sterilised

50mL conical filter unit with the new machV® PES membrane.

The ideal choice for small volume tissue culture work, and for fast, clean convenient filtration of 20mL to 50mL of media or buffers.
